

## CYB 220 Project Two Scenario One

You work at an information technology consulting firm, Byte Sized Solutions, as a network administrator. Your firm has been hired as a consultant for a land surveying company, GeoResults. Your team has created a plan to suit the company's needs and has provided you with the project specifications to implement. GeoResults has a contract to survey land and soil samples for eight months. The company will need a kiosk at its work site that connects to the internal GeoResults network. The FTP server is intended to be used for file storage for field-uploaded files. You are tasked with creating a proof of concept to make sure your solutions are appropriate.

### Project Specifications

- A. Ensure the admin network is the only network that can communicate with the FTP server.
- B. The users below should be added to the FTP server and should have the permissions listed.

User	Password	Permissions
jsmith	PassW0rd	User should be able to read and list content.
bjones	Password1234	User should be able to read and list content.
admin01	Pa\$\$w0rD1234	Admin should be able to read/write, delete, rename, and list.

- C. All web traffic originating from the kiosk on port 80 needs to be pointed to the web server.
