CYB-220 Module Three Activity Guide

Introduction

Objective

In this lab you will address the following objectives:

- Configure group policy settings to meet specifications

Overview

You are provided with a GNS3 environment that has a virtual PC that you are asked to harden. The use of GNS3 provides a sandbox environment for you to safely configure the Windows desktop and test to ensure your changes work before rolling them out to production machines. The group policy settings you need to change are listed in the table in the Module Three Activity Template document. This activity is an example of a real-world configuration activity that uses Windows resources to help harden the systems.

Usernames and Passwords

Device	Username	Password
PC_NOT_Hardened	Student	password
	Admin	Passw0rd

Prompt

Submit the Module Three Activity Template document to the learning environment with the filled-in paths to the group policies, and a screenshot of each changed setting within the GPO. Specifically, the following critical elements must be addressed:

1. Fill in the Path to GPO Setting column in the table, including the information in both columns D and E in the linked Microsoft spreadsheet.

2. Provide screenshots of each changed setting within the GPO:

- Hide specified Control Panel items
- Remove Task Manager
- Remove Recycle Bin icon from desktop
- Disable delete notifications on all volumes
- Turn off printing over HTTP
- Turn on menu bar by default
