Project One

With the merger of Helios and Fit-Advantage we must ensure that our privacy policy reflects the company standards but also follows the privacy laws of HIPAA as well as COPPA. These laws have guidance that must be followed when it comes to matters of consumer choice of data sharing. We should also take guidance from the Privacy Act of 1974 when it comes to data access and correction. Our company privacy policy will need to be amended in order to meet these requirements as well as support the company's number one priority, which is our customers and their privacy. As an organization we will do nothing but our best to ensure that customers' personal data is secured.

When it comes to privacy safeguards, we need to make sure that we have transparency in data sharing. With the merger of the two companies' people will have many questions and doubts about the company and the merger. We need to be as transparent as possible about the data use which is reflected in our company values. We need to also ensure that we give our customers control and consent over data sharing. They should be given the option of sharing all of their data or maybe just certain parts of the data. This is part of the HIPAA law as well as the COPPA, which pertains to children. Another thing that needs to be possible is that the customers have the ability to have access to correct any changes or mistakes in the data that is being used. This is part of the Privacy Act, but it also makes good business sense to ensure that customer data is accurate.

Based on information provided by Fit-Vantage, as well as a review of our own policies and principles regarding collecting information, I will recommend that we proceed with the merger, but with caution. Privacy and policy statements must be revised to reflect the dealings with the merger. Statements should be made so that the collection of information on consumers is carefully outlined and explained in such a way that our consumers understand what they are

sharing with us. Consumers must also understand the slight inherent risk involved with data sharing but have little to no doubt about its safety and protection on our part. Consumers should be assured that we will always abide by our information sharing policies and that we have action plans in the event of unexpected incidents or mishaps.
